Student Enrollment & Course Management System (SECMS)

User Story:

The Student Enrollment & Course Management System is a comprehensive Salesforce application designed to streamline and automate the academic enrollment operations of an educational institute. This system enables administrators, enrollment officers, and instructors to efficiently manage student records, course offerings, enrollments, instructor assignments, approval processes, payments, and reporting—all within a unified Salesforce environment.
environment.

1. INTRODUCTION

1.1 Project Overview:

This project aims to centralize all student, course, and enrollment-related data within a single Salesforce application to ensure easy data access, structured workflows, and accurate reporting. The system allows Enrollment Officers to manage student admissions, course registrations, and communication effectively, while instructors and administrators gain full transparency into course allocations and academic progress. The solution also enables automated instructor assignment, task creation, validation checks, and multi-level approval processes for enrollment management.

With Salesforce Flows, Approval Processes, Validation Rules, Reports, and Dashboards, the organization can ensure that all enrollment operations—from admission to course completion—are handled systematically and with continuous monitoring of key performance indicators such as enrollment volume, revenue, student status distribution, and pending approvals.

1.2 Purpose:

The primary purpose of SECMS is to replace manual and fragmented enrollment processes with a scalable, automated, and secure Salesforce solution that ensures:

- Accurate student data management
- Structured enrollment workflows
- Automated approvals and validations
- Transparent reporting and monitoring
- Enhanced communication between students, instructors, and administrators
- Secure payment tracking and fee management
- Scalable architecture for future academic growth

1.3 Scope:

Briefly: The system covers student admission, course catalog management, enrollment processing, instructor allocation, fee payment, approval hierarchies, and analytics dashboards. Integration with Salesforce standard objects and custom objects ensures end-to-end academic operations management.

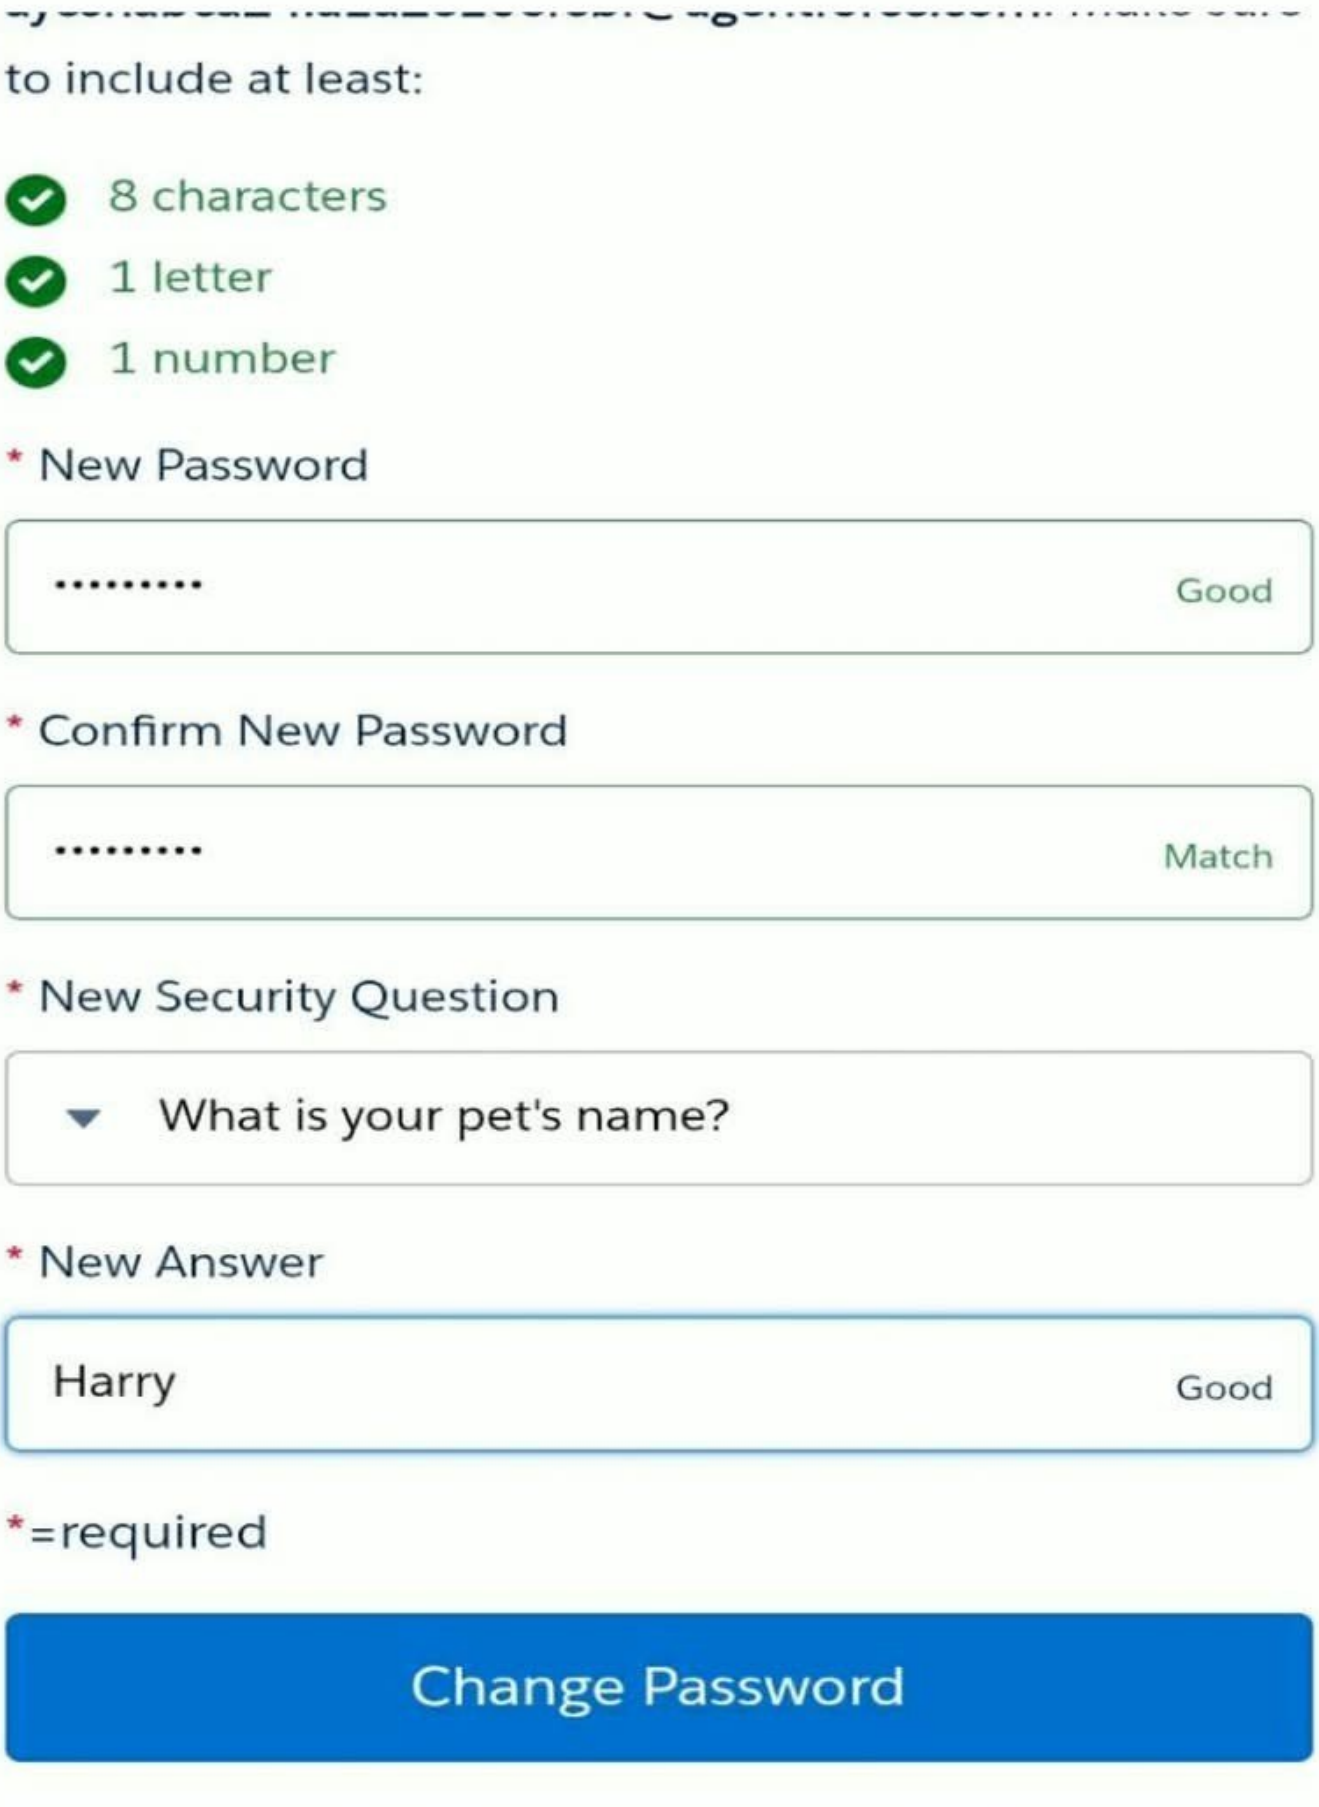

7. Project Documentation - Phase 1

Phase 1: Requirement Analysis and Planning

Task: Developer Account Creation

Assigned to: S.Ayesha Suhaina | Team Lead: N.Sahanas Ruhi

Definition: Creating a Salesforce Developer Account provides a free, fully-functional Salesforce org for development and testing. It is the first mandatory step to build and deploy the SECMS application.

7. Project Documentation - Phase 2

Phase 2: Backend Development & Configuration

Task 1: Object Creation

Definition: Objects are database tables in Salesforce that store specific data. Custom Objects Student, Course, Instructor, Enrollment created to structure SECMS data model.

Task 2: Fields Creation

Definition: Fields are columns in an object that store specific information like Name, Email, Phone, Date. 9 fields in Student, 13 fields in Enrollment created for data capture.

Task 3: Create Relationship

Definition: Relationships link objects together. Lookup relationship Course__c in Enrollment links Enrollment to Course object, ensuring data integrity and relational access.

Task 4: Validation Rules

Definition: Validation Rules prevent invalid data entry. Student_Email_Domain_Validation ensures Email must be a valid student institutional email.

Task 5: Validation Rules

Definition: Validation Rule Fees_Must_Be_Paid_Before_Approval prevents approval if fees not paid. Error: Fees must be paid before approving an enrollment. Ensures business logic.

Task 6: Approval Processes

Definition: Approval Process automates record approval. Approval Enrollment Request sends Enrollment to Training Manager for approval, adds Approval History to page layouts.

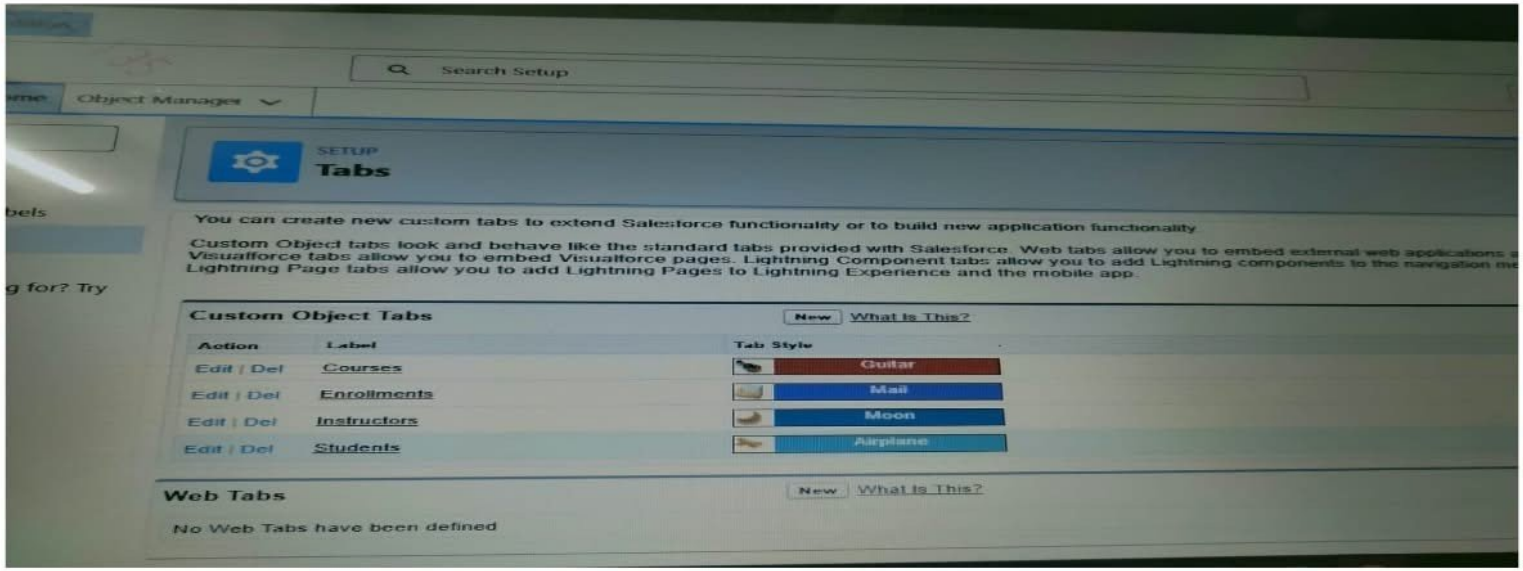

7. Project Documentation - Phase 3

Phase 3: UI/UX Development and Customisation

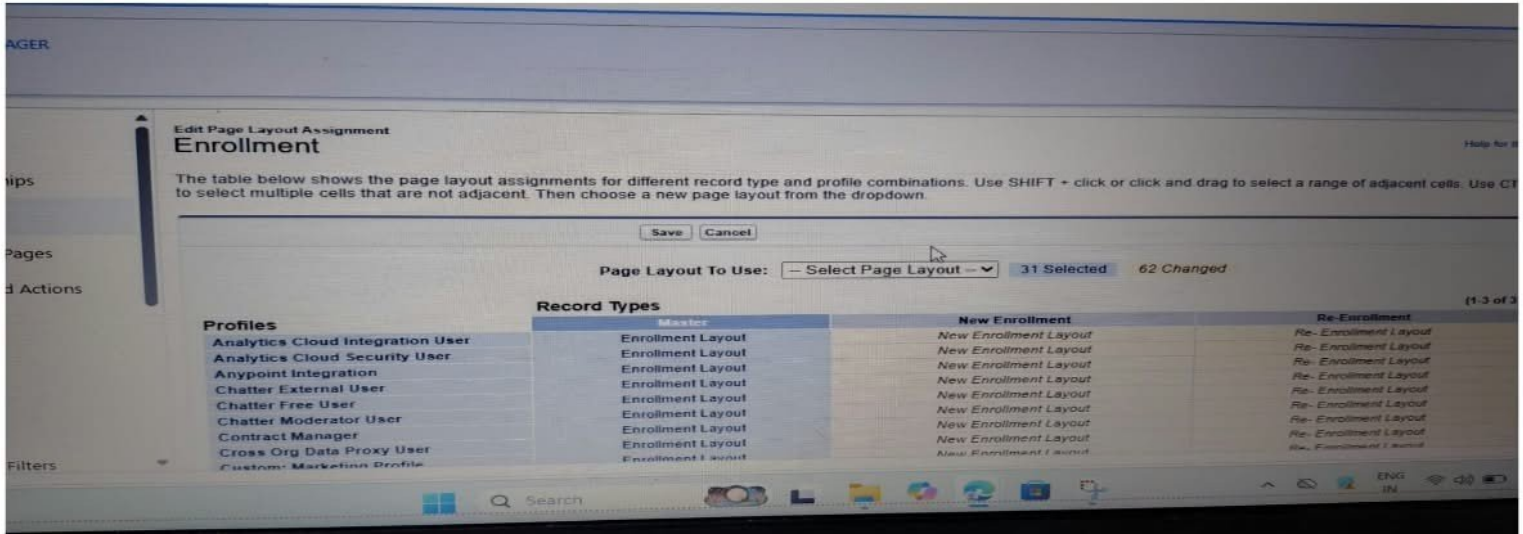

Task 1: Tabs

Definition: Tabs provide navigation to access objects quickly. Custom Object Tabs created for Courses (Guitar), Enrollments (Mail), Instructors (Moon), Students (Airplane) to extend Salesforce functionality.

Task 2: Page Layouts and Records

Definition: Page Layouts control organization of fields, buttons, related lists. Assignment table shows Enrollment Layout, New Enrollment Layout, Re-Enrollment Layout assigned to profiles like Analytics, Chatter, Contract Manager for record type based display.

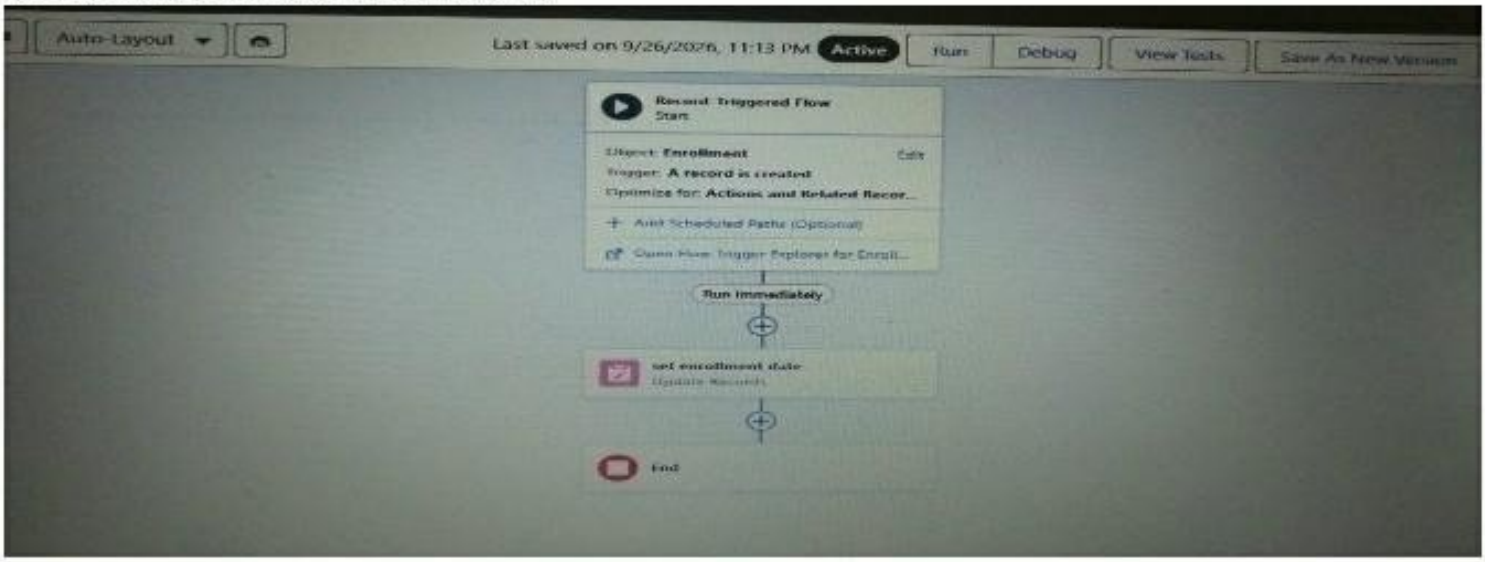

7. Project Documentation - Phase 4

Phase 4: Data Migration, Testing & Security

Task 1: Automation with Flow

Definition: Flow automates business processes without code. Record-Triggered Flow on Enrollment object triggers when record created, optimized for Actions and Related Records, sets enrollment date via Update Records element.

Task 2: Reports

Definition: Reports display filtered data in tabular or chart format. Students by Status report groups by Status Active (4 records) showing Student Name Abhishek, Vignesh, Swaroop, Sushanth, Phone, Email for analysis.

Task 3: Dashboard

Definition: Dashboard visualizes reports as charts, gauges, tables for real-time insights. SECMS Dashboard shows Students by Status bar chart, Enrollments by Course, Pending Enrollment Approvals, Revenue Fees Paid gauge.

Task 4: Security Setup & Final Documentation

Definition: Conclusion and Future Scope defines project outcome. SECMS streamlines student lifecycle using validation, flows, approval, dashboards improving accuracy, efficiency, decision-making. Future: Payment gateway, Self-service portal, Analytics, Mobile support.

7. Project Documentation - Phase 5

Conclusion:

The Salesforce Student Enrollment & Course Management System successfully streamlines the entire student academic lifecycle—from student registration and course creation to enrollment management, instructor assignment, approvals, revenue tracking, and reporting. By leveraging Salesforce's automation tools such as validation rules, flows, approval processes, and dashboards, the system improves data accuracy, operational efficiency, and decision-making. This project demonstrates how Salesforce can transform manual academic processes into a scalable, reliable, and user-friendly digital solution.

FUTURE SCOPE

- Payment gateway integration
- Student self-service portal
- Analytics-driven insights
- Mobile access support

APPENDIX

- Source Code: Salesforce Configuration
- Dataset: Salesforce Objects
- GitHub / Demo: Salesforce Developer Org.
